2. Claims 1 and 3-13 are pending in the application and have been examined.

### ***Allowable Subject Matter***

3. Claims 1 and 3-13 are allowed. Claim 1 recites the following allowable subject matter: “activating a special mode of operation, particularly a flash mode of the base chip, once after the check has been made to see whether the special sequence has been successfully applied and after the reset operation, by allowing access to a monitoring module that is associated with the base chip to take place in a manner which is simplified in comparison with the normal mode of operation of the microcontroller unit; supplying a permanent energy supply from a battery unit to the monitoring module; and switching a microcontroller supply unit of the base chip to enable or disable a temporary energy supply from the battery unit to the microcontroller unit.” Claim 5 recites the following allowable subject matter: “a microcontroller supply unit connected to the microcontroller unit, wherein the microcontroller supply unit is permanently associated with a battery unit; a switch connected to the microcontroller supply unit, wherein the switch is configured to switch the microcontroller supply unit to enable or disable a temporary energy supply from the battery unit to the microcontroller unit; and a monitoring module that is associated with the microcontroller unit, wherein a special mode of operation, particularly a flash mode of the base chip, can be activated once after the check has been made to see whether the special sequence has been successfully applied and after the reset operation, by allowing access to the monitoring module to take place in a manner which is simplified in comparison with the

normal mode of operation of the microcontroller unit, wherein the monitoring module is permanently associated with the battery unit so that the monitoring module receives a permanent energy supply from the battery unit.”
